Cuddly Wuddly Duddly Fuddly is designed for those who like to put a little effort into growing what they like.

If a digital garden zoo is what they like growing that is.

- Grow your herd while you are away!
- Heaps of fun, two heaps even!

Case Study

"Simple is better than complex, complex is better than complicated."
–The zen of python, Tim Roberts

Testing if this is possible

Ævar Guðmundsson aevar.gudmundsson@gmail.com
Earth, the dry part, somewhere near the Arctic
Fax number available upon request

Does this work?

The simplest version of this game is just a flat probability container. We go into further details on it all later. In it's simplest core it only depends on what you place into the dispenser creates different animals and creatures.

Does The Concept play?

Unless we are just building a card collection game, which of course the core can be used for as well.

We add some interactivity to the general creatures. A place where the creatures graze, interact, and head out on missions looking for creatures to match with and create further eggs for the incubator.

- Complex
- Is better
- Than Complicated

Ævar Guðmundsson aevar.gudmundsson@gmail.com
Earth, the dry part, somewhere near the Arctic
Fax number available upon request

Does it scale into an actual game?

Introducing idle mechanics into this form of an incubator on par with how you grow Pokemon eggs becamomes the most practical approach. You need to put a little effort towards growing new creatures for the game itself to grow.

Collecting and breeding each creature to get even more eggs into the incubator which controls the probability of what comes out of it.

But the creature, they don't grow unless you tend to them with care.

Charlie?
>yes?
How do we know what the c stands for?
>what?
The c, why does it stand for care?
>what the fuck are you on about?
I was reading the steering manual and it says the c in the d.u.c.k. system stands for care.
>Yes, and?
How do we know that?
>What do you mean?
If none of us can figure out what the k stands for, how do we know what the c stands for?

Pokemon eggs
Flock
Idle Mechanics
Periphreals
Toy sales
Removal, of doubt.

So in conclusion, in a world full of brain eating zombies and Alpaca Cooking shows, why not give this a try

Legislation

There are no legal considerations to take into account on our end. Everything in this app is built using proprietary tools and assets owned by us. Where the topic comes up however is in relation to how the app goes to market. Solid licensing is what brings this to market in a practical manner.

Standardization

There is a correlation to be found between rising digital asset sales and declining physical toy sales, toy manufacturers who some have hundreds of years of experience identifying which toys any generation loves to play with tend to struggle when it comes to digitizing their legacy.

Mostly all toy manufacturers have a history of having jumped the gun between 1985-2005, attempting to pre-emptively take on the digital market before the average western consumer was ready for the shift, resulting in a catastrophic financial loss.

15 years later when the digital industry is turning mostly to tangible toy sales, and the tangeble market is turning to digital sales it is only a matter of time before we see the two fields merge.

Cost level

Asset builds is where the cost peaks. However realistically quite low per volume due to the modular approach, we only supply the modules, users build the toys themselves.

Trust

There are no applicable issues to this regard, the technology used is well established and the genre a few decades old with no foreseeable downturns in the next decade regardless of alternate engines arriving.

Potential Costumers

Neither an “everyone and the grandMA“ scenario, nor is this an edge case cult base case. The user base here is solely dependant on marketing narrative and direction, works at any scale.

> “We should note that the gelatine which makes up most of the fluid is actually edible in case of emergency but please refrain from doing so since you will quickly find yourself out of fuel” -Sunset Survival and the quest for the rest

General Description

Cuddly, Wuddly, and Duddly, are the Fuddlies. Ghastly creatures by and large except on the rare exception on a genetics roulette become the most adorable things you have come across.

The game itself mostly evolves around the hatch phase where you spend a good chunk of the game trying to arrange their eggs into an incubator to produce new animals.

How exactly you arrange them into the incubator becomes the determining factor as to how they turn out and what you can then do with that creature.

Components

- Incubator
- Characters
- Game Menu
- The Collection
- Map
- Garden
- General Mechanics
- Audio Scheme Layout

Incubator

It's not the pixels on your screen, those are just electricity portrayed as different colors to form imagery in your mind.

That other thing however. How you interact with these electrical light fixtures with your finger, that is what brings about the question of what this is.

Characters

All the peeps.

The Menu

The menu system here is a thing and this picture has no relation to the actual menu used on this one. we shouldn´t even be discussing it in this context. It's just a placeholder for describing various different platform integrations.

The Collection

The collection itself, where you put all the nice things you have collected, in it's core it's a shared inventory system, It holds both unlocked modules that you can use to combine and merge into more elaborate objects but as well the container where you store and access ready made game items.

The Map

And text which is just a lorem ipsum replacement because actual lorem is Cicero rather than random.

The Garden

Where we grow things. Jeremiah stated is quite clearly in his letter to Babylon. Wake up, and grow your garden, or your tower will fall.

General Mechanics

Just a base descripton. Which is why there are 2 different chapters with identical categories. One is human speak overview the other granular detail. Two exact opposite ends of the same cow should not be described as one.

Ævar Guðmundsson aevar.gudmundsson@gmail.com

Fax number available upon request

Compartmental Overview

"The other one is a little more peculiar though, the so called d.u.c.k. system. We are not sure why but on occasion the system itself appears to collapse into full blown panic, sometimes suggesting a Kernel but not always. There is really no way to know. All we know is d.u.c. has been defined as deliver utmost care. the k, remains a mystery."
–Sunrise Survival and the quest for the rest

The following is a complete detail listing of each compnonent required in order to finalize each phase.
This part only applies per component on section assigned, and should walk you through the entire assembly.

Components

- Incubator
- Characters
- Game Menu
- The Collection
- Map
- Garden
- General Mechanics
- Audio Scheme Layout

It describes the thing in detail, color, composition, behaviour and so forth

Including the cost level per segment which summarizes into the total cost

Ævar Guðmundsson aevar.gudmundsson@gmail.com
Earth, the dry part, somewhere near the Arctic
Fax number available upon request

Incubator

Base collection chamber. Has release mechanism to stack into 3 rows, red, purple, blue. The Release mechanism has a lever which lets you start a chain reaction at any given time.

There is a minimum 25 eggs required for the incubator to work.

And it fits 99 eggs.

Mascot scheme and choices | and practicality

Aliquam ludere musicam

Characters

The primary Wuddlies all derive from 3 ancestors.

Cuddly Wuddly, the collectable, nearly impossible to unlock.
Duddly Wuddly, terrifying, eats your animals and breaks your objects.

Fuddly Wuddly, hideous creature, will dirty up the wool and reduce the value of most collectibles.

In variations, these are countably infinite in number, how they behave, their attraction and cuteness level, their agression, their adoration and care, dependant on which genome they derive from.

Breed carefully, big bonus but high risk of losing your progress. In your default collection, you have 1 red, 1 blue, 1 purple.

If the numbers in the incubator are lined up correctly, this will trigger a chain reaction which leads to a Cuddly, rather than a Duddly or a Fuddly.

-Magnetism
-Shyness
-Aggression
-Empathy
-Luck
-Uncertainty

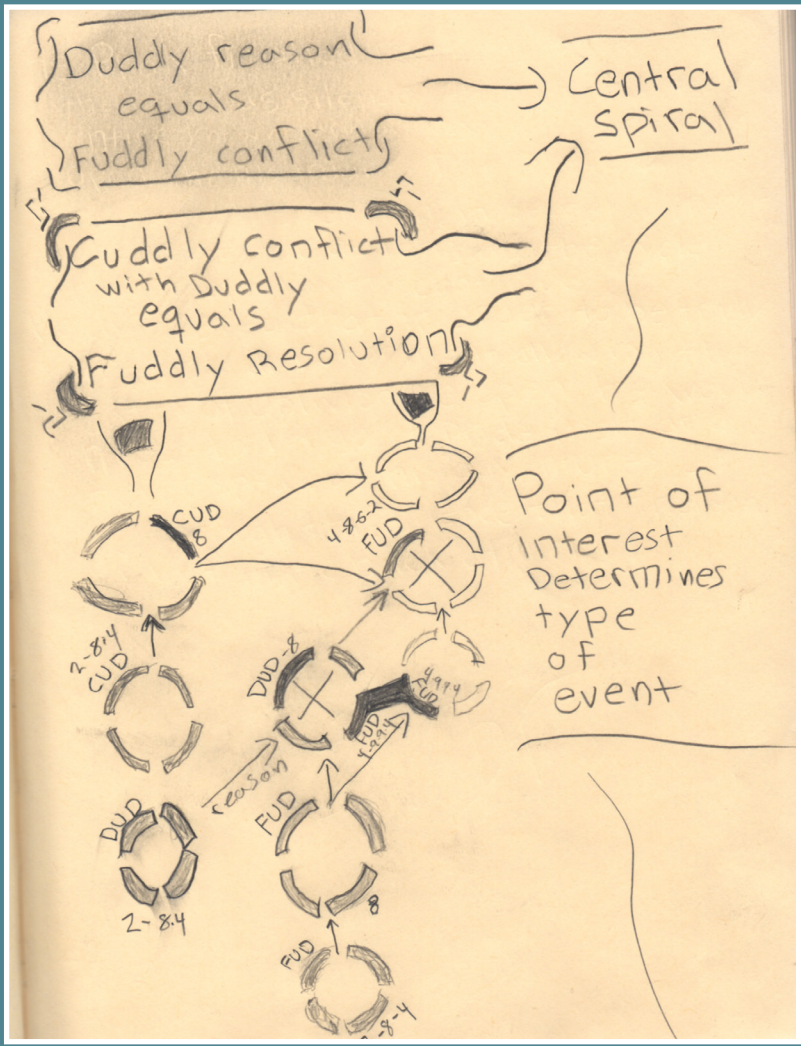
The Map



Sort of self explanatory, if I'd ask me.

The best part

actually the most fun part

Ævar Guðmundsson aevar.gudmundsson@gmail.com
Earth, the dry part, somewhere near the Arctic
Fax number available upon request

The Garden

Fro grazing

and Raizin

Omnes et stantes loquimini

General Mechanics

The Incubator has 99 eggs.
- 23 blue
- 33 purple
- 43 red

Each egg combined in pairs
- red + blue = purple
- blue + purple = red
- purple + red = blue

The two piles with the highest stack release one egg each.
If the 2 lower stacked ones are equal one at random releases an egg.

Some of the eggs will randomly release a bonus material egg, the
likelyhood of a hidden bonus egg can be increased with combos, giving incentive to stack the relase mechanism to 99 before releasing.

It sounds easy

right?

Core Talent Required

Core talent

Art Director
Impact : Overall look and feel of the game board
Requirement : Plush toys....

Software Developer
Impact : Code development and implementation
Requirement : C# , Server code, and database maintenance

Animation Supervisor
Impact : Creature Animation
Requirement : 3D Animator

Set Design
Impact : Garden and Side mission map design
Requirement : Exterior landscaping experience

Moar talent

Colorist
Impact : Final grade and Color
Requirement : Some cinematic experience

Sound Designer
Impact : Overall Audio Design
Requirement : Knows the difference between a beep and a boop

Story Supervisor
Impact : The Fuddly story
Requirement : Narrative storyline experience

Rigging Lead
Impact : Omnirig for creatures
Requirement : Standard FK / IK humanIK rigging experience

Character articulation artist
Impact : Tweaks to the “adorable“ factor
Requirement : Plush Toy design experience, animation or motion media experience preferred

Lighting TD
Impact : Garden lighting environment
Requirement : Solid 3D lighting experience

The many ways to become a better digital being

- Specific input eggs
- Hearthstone pack with eggs
- Specific output eggs
- As is tradition
- Packet spread (see “wrestling“ scheme)
    MT generates new “wrestling“ board

- The harder the side mission the sweeter the reward
- Grow your animal modules to create the ultimate
- Time dialation is possible when you have a speed setting
- Garden defences
- Electronics..... Who doesn’t love Curby

General economics, the many ways to becoming a better digital being

- Color shortcuts
- New Sheep
- Complete Challenge levels
- Map and Character purchases
  - New levels
  - Automation Equipment
  - Abominable sheep
  - And baby goats of course
